

Help build a sustainable future
with Community Power

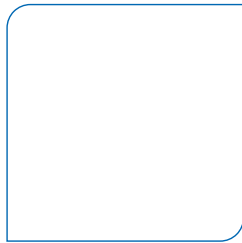

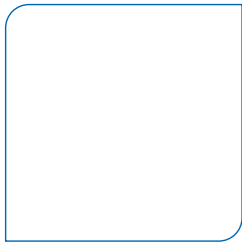

Helping local communities build a sustainable future

Community Power is an innovative new idea from Powergen that makes the building of small-scale wind farms possible. It has been created to ensure that the benefits from the renewable energy are shared with the local community.

By working together with the community and local authorities, this scheme helps local people become involved in wind farm developments in their area. As well as benefiting the environment, the wind farms will help local authorities meet their targets for building a sustainable future.

A Community Power scheme will generate enough electricity to power upto 3000 homes (3 to 5MW) and will consist of two or three wind turbines.

See three great benefits with Community Power

1. A yearly income for your community

By offering sites for wind farms, community groups can expect to get a yearly income for about 20 years. This money can be spent as the community chooses.

Great ideas so far have included buying new books for local schools, restoring local buildings or landmarks, redecorating community centres, improving village playgrounds and even building micro wind turbines for village halls.

2. Help for local homes

By becoming part of a Community Power scheme everyone in the community can benefit. Energy efficiency, together with renewable energy schemes, is vital for reducing green house gas emissions. We can offer advice on how to save energy and money and in many cases, depending on the type of home and personal circumstances, pay for energy efficiency measures to be completed on homes in your community.

3. Help for local schools

Primary schools close to Community Power sites will have the opportunity to access our innovative changingclimates.co.uk website. Our web based programme is designed to provide professional development for primary school teachers. This education programme provides teachers with the tools to use the weather as a topic for work across the curriculum and includes a section on renewable energy. The overall aim is to raise educational achievement within schools.

A funded wind farm in your community

The Community Power scheme is fully funded by Powergen. All costs involved from the planning process to the construction of the wind farm are paid for by us. All we ask is that the community commits its time and energy to making the schemes a success.

Your next step

Our site assessment pack is very simple to complete and has been designed to allow us to feedback quickly on the suitability of likely sites.

We're currently offering this as a free no obligation service to all interested communities and local authorities.
